

ROAIMS BEGINNER'S TRAINING

Introduction to the ROSEN Asset Integrity Management Software (ROAIMS) for pipelines, the integrity principles reflected in the software, data analysis concepts as well as result interpretation and reporting options.

Duration: 5 days

Conditions: This course is suitable for new users as well as for ROAIMS users with little practical experience, who have not attended a formal training in the past.

LEARNING OBJECTIVES:

- Understand ROAIMS in the context of pipeline integrity management
- Get to know the modules being part of the ROAIMS suite and their purpose
- Execute main functionalities of the software suite, like data integration, data analysis, data visualization and reporting
- Describe the main workflows and relationships between the different modules of the software suite

DESCRIPTION:

This training is an instructor led training with interactive classroom discussions covering the principal workflows and functionalities of the ROAIMS Software suite. The training starts with a one day integrity awareness workshop, providing a theoretical overview of ROAIMS in the context of pipeline integrity management. The remaining four days concentrate on dedicated theoretical training of the different modules within ROAIMS. The training will outline the relationships between the different software modules, comprehensive workflows and module specific functionality introductions. Small hands on sessions are considered in the ROAIMS Beginners training.

TARGET GROUP:

- Employees who are planned to actively work with the ROAIMS software suite in order to understand the principals of the software
- Employees who are involved in pipeline integrity management in their daily work and should get an overview on how the software could support current business processes
- Managers that need to understand the use of ROAIMS

SAMPLE AGENDA:

Training activities are daily from 9am to 5pm

Day 1	Integrity awareness workshop ROAIMS in context of pipeline integrity management
Day 2	ROAIMS Overview + Data Integration Modules: Asset Manager, User Permission, Extract Transform and Load, Alignment Manager
Day 3	Data Analysis Modules: Feature Assessment, Corrosion Analyst, Cathodic Protection Analyst, Risk Assessment
Day 4	Data Visualisation Modules: Data Alignment Analyst, Geospatial Analyst
Day 5	Reporting and Rehabilitation Modules Task Manager, Verification Manager, Dashboard
