JOB COMPLETED

ROSEN DELIVERS BIGGEST ORDER OF POLYURETHANE-LINED PIPE IN COMPANY HISTORY

Fort McMurray, Alberta, Canada. November 2019 – ROSEN successfully concluded its biggest production job ever in terms of converting bare steel pipe to internally coated wear-resistant pipe. As part of a planned production facility upgrade, the project included the installation of newly coated bare steel pipe. To accomplish this, ROSEN delivered a total of 21 kilometers of wear-resistant pipe coated with the RoCoat™ liner. The pipe was also equipped with a wear-monitoring system that makes it possible to acquire the coating condition “online,” enabling better integrity management of the asset.

The lined pipe and wear-monitoring devices were designed and manufactured at ROSEN’s in-house production facility in Calgary, Alberta, which meant local resources were increased heavily. Approximately 35 people were hired locally to fill numerous positions, including shop production personnel, front office staff, shipping and receiving, forklift operators, and equipment maintenance professionals. Securing sufficient material to complete the production also involved numerous Canadian and international suppliers and subcontractors.

As a final deliverable, ROSEN Canada supplied 21 kilometers of pipe in 60’ lengths, along with a variety of coated bends and fittings to accommodate the customer’s scheduled major maintenance and new pipeline construction. During the maintenance outage, the original carbon steel pipelines were replaced with the RoCoat™-lined pipe system.

The client, their selected EPC contractor and the installation construction group all worked closely with ROSEN to ensure efficient and cost-effective delivery of the coated pipe.

The project’s scope of work was enormous for ROSEN, but the company was able to complete this project on schedule with zero injuries and a high-quality product for the client.

About the ROSEN Group

The ROSEN Group is a globally leading provider of cutting-edge solutions in all areas of the integrity process chain. Since its origins as a one-man business in 1981, ROSEN has rapidly grown and continues to do so. Today, the business is still privately owned and consists of a team of more than 3,300 employees operating in more than 120 countries.

ROSEN's products and services:

- Inspection of critical industrial assets to ensure reliable operations of the highest standards and effectiveness
- Customized engineering consultancy providing efficient asset integrity management
- Production and supply of customized novel systems and products
- Market-driven, topical state-of-the-art research and development providing "added-value" products and services
